

VAPORTRONIC™

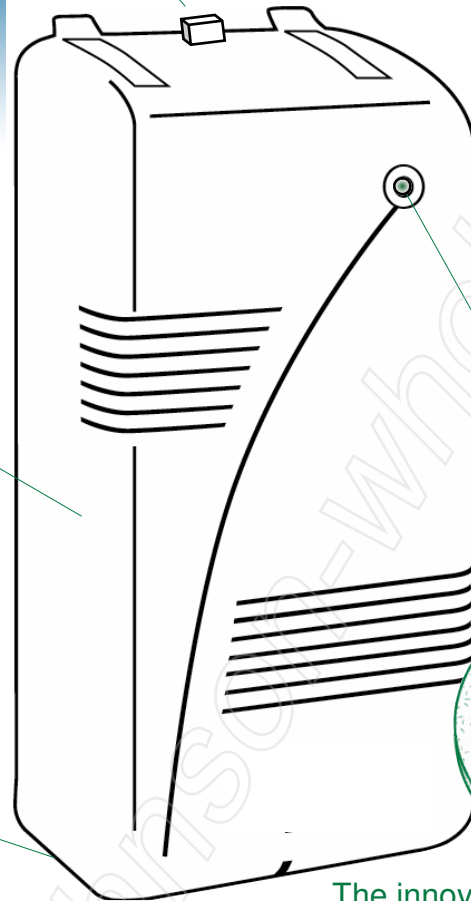

The Electronic Wall Cabinet System
That Deodorizes With an "Element" of Style

Removable cap conceals "On/Off" switch that may be used as desired.

Stylish design and off-white color are appropriate for any decor

Discrete pin-lock mechanism discourages tampering

Blinking green LED confirms unit operation

Unit accommodates from 1 to 5 disks, available in many popular fragrances

- ◆ Innovative alternative to messy gels and sprays
- ◆ Easy to use
- ◆ Versatile
- ◆ Adjustable pulsing fan
- ◆ Treats areas up to 10,000 cu. ft.
- ◆ Disks available in many popular fragrances

The innovative Vaportronic wall cabinet dispenses a natural deodorizing dry vapor through the use of unique, replaceable disk technology—with a convenient "on/off" switch. Versatile and economical, the battery-operated Vaportronic features programmable pulsing fan operation and capacity for up to five disks for customized deodorizing output. Its stylish design and compact size enhance any décor.

SUGGESTED APPLICATIONS

- Restrooms
- Hotel Rooms
- Lobbies/Reception Areas
- Utility Closets
- Long-term Patient Rooms
- Home Health Care
- Pet Areas/Veterinary Facilities
- Physicians' Offices
- Boats
- Recreational Vehicles
- Student Dorm Rooms
- Kitchens
- Offices...and more!

Designed/Engineered for Success

The Vaportronic was created with ecology, effectiveness and efficiency as guidelines. Extensive market research, innovative design and careful engineering have resulted in a product that represents a new standard of value in deodorizing systems.

Superior Alternative to Traditional Spray Systems

The Vaportronic is a versatile air treatment system, dispensing a neutralizing dry vapor through the use of special fragrance disks that contain blends of natural essential oils—providing an innovative, safe alternative to messy, costly, waste-generating gels, liquids and pressurized spray systems.

Disks are impregnated with a unique blend of non-toxic, natural oils and are available in several popular fragrances. By adjusting the programmable control and inserting up to five elements, the Vaportronic system is capable of effectively treating areas up to 40' x 40'.

Simple to Use

Simply install a D-cell battery, insert the desired number of elements in the bays and close the cover. A blinking green LED light confirms unit operation. The compact unit can be wall-mounted with screws or supplied double-backed tape, or used free-standing.

Low Operating Costs/Ecologically Friendly

By controlling operation with the new "On/Off" switch, even greater economies can be realized—both battery and disk life are increased! In addition, aroma disks require less warehouse space than spray can refills; reduce costly shipping charges, and generate little waste. The biodegradable fiber elements contain no harmful distillates, inert ingredients or ozone-depleting chemicals.

With an alkaline, D-cell battery and the adjustable control at the highest setting, the battery life in the Vaportronic has been rated at up to sixty days—even longer when the optional "On/Off" switch is used. For convenience and economy, the battery may be replaced independently of the aroma elements.

Quiet

Virtually silent in operation, the unit's fan increases the rate of deodorization by drawing air over the aroma elements and releasing it as a dry vapor.

Classic Design

The unit's stylish design and off-white color make it an attractive addition to any decor. A pin-lock mechanism located discretely at the bottom of the unit discourages tampering and provides maximum security.

Enhanced Model With On/Off Switch

The popular Vaportronic features a special "On/Off" switch for even greater versatility and cost savings. In situations where continual deodorization is required, use the Vaportronic as it arrives from the factory. Where intermittent operation is desired, simply raise the cover and lift off the protective switch cap. Close the cover and slide the switch back to turn the unit off when not in use.

The Vaportronic is designed so that fan operation is set at the factory for one minute "on," one minute "off," with "off" cycles adjustable to 30 minutes. The factory setting provides the highest level of vapor output, and initial treatment should begin at that level. By inserting up to five aroma elements, the desired rate of output can be customized to meet user demands. The elements remain effective for up to 30 days and can be routinely replaced during scheduled servicing.

Specifications

- ✓ On/Off switch option
- ✓ One-year limited warranty
- ✓ Use wall-mounted or free-standing
- ✓ Requires one D-cell battery
- ✓ Flashing green LED operation indicator
- ✓ Pin-lock mechanism for maximum security
- ✓ Weighs less than one pound
- ✓ Approximate dimensions 7" x 3" x 3"
- ✓ Case pack: 6 each
