

BACKRETE® FOOD GREASE DIGESTER

Consumes Vegetable Oil & Food Grease

High Strength, Bioactive Cleaner for Concrete,

Dumpster Pads, Kitchen Floors, Bathroom Floors, Sidewalks, Trash Cans, Porous Tile & Grout

Backrete Food Grease Digester is a safe, very effective bioactive cleaner, organic waste digester and odor eliminator designed especially for porous floors & walls.

Formulated with a pleasant scent, Backrete Food Grease Digester is recommended for use at food service and food processing facilities, as well as in commercial restrooms. Backrete Food Grease Digester bioactive agents are based on a highly optimized bacteria mixture that produces five different types of enzymes (i.e. lipase, amylase, protease, cellulase and urease).

These enzymes effectively break down organic matter such as: Grease, Food, Blood, Cellulosic Fibers, Urine, Vomit and Feces.

After application, surfaces are left extremely clean and odor free.

CAUTION: Do not mix or use this product with acid, alkaline, or product containing bleach. Do not use on food contact surfaces.

Backrete Food Grease Digester is a Multi-Use Product.

DIRECTIONS FOR USE:

HEAVILY SOILED AREAS:

- 1) Thoroughly wet the area to be cleaned with water.
- 2) Pour a liberal amount of Backrete Food Grease Digester directly on to the heavily soiled area
- 3) Aggressively agitate the Backrete Food Grease Digester with a scrub brush and allow it to soak into the soiled area, leave area wet.
- 4) If the soil load is extreme, rinse the area and repeat steps 1-3.
- 5) Overnight; the bacteria will continue working to consume the greases and other organic soils through the night.

The bacteria in Backrete Food Grease Digester prefer a warm, humid environment for their most active metabolic rate of consumption.

Best results are seen after (24) hours use.

Lightly Soiled Areas:

- 1) Thoroughly wet the area to be cleaned with water.
- 2) Backrete Food Grease Digester may be diluted up to 8 to 1 with water.
- 3) Aggressively agitate the Backrete Food Grease Digester with a scrub brush or mop and allow it to soak into the pores of the spoiled area, leave area wet.

4) Pour any extra solution left over into the floor drains to help consume the organic soils and their odors which are inside the drains.

5) Overnight; the bacteria will continue working to consume the greases and other organic soils through the night.

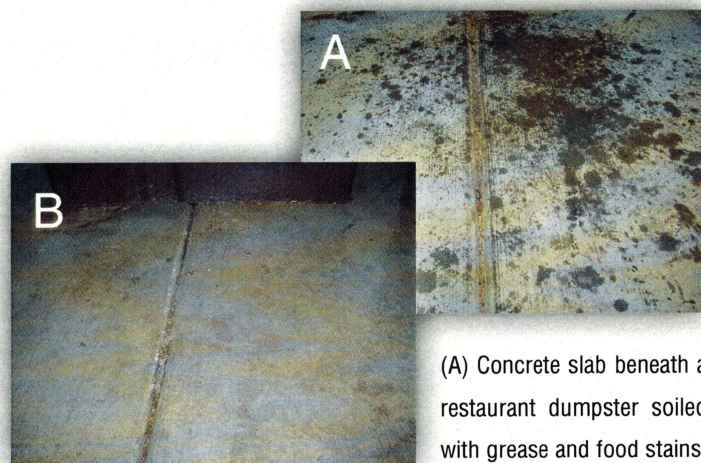

The bacteria in Backrete Food Grease Digester prefer a warm, humid environment for their most active metabolic rate of consumption.

Best results are seen after (24) hours use.

Spray Cleaning:

- 1) Use Backrete Food Grease Digester with the Foam Spray Head which is provided.
- 2) Backrete Food Grease Digester will foam to clean trash cans, spray around urinals / toilets. Agitate floor area with brush, leave surface wet.

Note: Do not use Backrete Food Grease Digester on any food contact area.

(A) Concrete slab beneath a restaurant dumpster soiled with grease and food stains.

(B) This is same concrete slab after scrubbing with Backretes Food Grease Digester and allowing the cleaning solution to soak in overnight.
