

5 REASONS TO CHOOSE

Order directly from www.johnson-wholesale.com

1 Designed specifically to clean concrete, densified concrete and densified-polished concrete.

CreteClean Plus with Scar Guard™ is the only product on the market designed with a pH level of 9-10 (diluted for use) to specifically clean concrete, densified concrete and densified-polished concrete. It is the only product recommended by Curecrete - *the originator of the concrete densification and polishing markets* - to not only clean their treated floors, but also ALL concrete floors.

Floor cleaners not designed for concrete cleaning can potentially affect the finish and performance of concrete. An effective concrete cleaner must be at an effective, yet safe alkaline level, and must have properties capable of releasing soils from the surface and carrying away particulates in the solution.

2 Minimize visibility of minor scratches and blemishes. Maintain the sheen of densified and densified-polished concrete.

CreteClean Plus with Scar Guard uses the unique proprietary additive "Scar Guard" to work with the floor on a regular basis to reduce the visual impact of scratches and scars. This unique additive conditions the floor for other maintenance procedures like burnishing, and diamond pad or diamond brush polishing.

CreteClean Plus with Scar Guard is a performance enhancing cleaning agent which, over time, can achieve the following results:

- **Decrease** the **visibility** of **minor scratches** and **blemishes**,
- **Help maintain** the **sheen** of densified concrete surfaces,
- **Decrease porosity**, and
- **Help strengthen** and **harden** concrete surfaces

3 High dilution ratio: Use 75% less product. Save more money. Less product is better for the environment.

CreteClean Plus with Scar Guard is designed to work at a very high dilution ratio of 1 oz / gal of water (7.8 mL / L). Other common detergents on the market today typically require 4 - 5 oz / gal of water (31.2 mL / L).

The high dilution rate of **CreteClean Plus with Scar Guard** is the lowest in use dilution cost of any concrete cleaning product; fractions of a cent per square foot. Using 75% less product equals significant savings. This high dilution ratio also minimizes the amount of chemical effluent placed into the waste stream, as well as dramatically reduces the amount of plastic packaging discarded in landfills.

4 Tested and certified by NSF International. Suitable for use in institutional, industrial and food handling establishments.

CreteClean Plus with Scar Guard is proud to be NSF Certified, having been evaluated and reviewed by an impartial third party inspector. **CreteClean Plus with Scar Guard** meets and exceeds strict standards for cleanability, sanitation and food protection, a commitment to quality, and strict standards for public health protection.

5 Extension of manufacturer's warranty on previously densified and densified-polished concrete floors.

When used as directed, floors treated with the Ashford Formula™ or the RetroPlate® System can qualify for an extension of their original Manufacturer Warranty to a Lifetime Warranty. Qualifying conditions apply. Please contact Curecrete for more information.

Curecrete is the manufacturer of the Ashford Formula™, the most widely used liquid concrete densifier, sealer and hardener in the world, and the RetroPlate® System, the original concrete polishing system. Curecrete is the pioneer of the concrete densification process and the concrete polishing system. Today, Curecrete remains the unmatched leader in the densification industry and is the one dependable choice for all your concrete flooring needs.
